

The D 201 RH dumper, ideal for moving suitcases, merchandise and people at Reus Airport.

Background

Lesma Handling is looking for the very best equipment to transport luggage and perform various kinds of maintenance work at Girona and Reus airports, at which it provides comprehensive handling services.

They need a versatile vehicle with sufficient load capacity that is more economical than the typical tow trucks used at airports.

AUSA Commercial Solution

AUSA offers Lesma Handling a vehicle with all these characteristics: the D 201 RH. This dumper adapts to the client's needs, thanks to a skip and special wheels that enable it to perform several different functions: transporting suitcases and other goods, or transporting people around the airport complex. The load capacity of the D 201 RH (between 2 and 3 Tn) makes it the ideal vehicle for these tasks.

Work to be done

The D 201 RH vehicles were acquired by Lesma Handling for use at Girona Airport and later moved to Reus Airport, where they are used to carry out various tasks. They replace the small vehicles used to tow luggage trailers. Their low running costs and high load capacity make them ideal for this job. They are also used for other typical airport tasks: transporting electronic equipment needed for maintenance; bringing the passenger stairs to the airplane; and transporting personnel.

D 201 RH

D 201 RH, Great capacity and productivity

The D 201 RH belongs to the AUSA range of rigid chassis dumpers. With a load capacity of between 2,000 and 3,000 kg, it comes with two different types of transmission: mechanical or hydrostatic. The former guarantees maximum reliability, while the latter provides high performance with minimal maintenance. The D 201 RH also has continuous four-wheel drive, which can prove extremely useful for different types of surfaces. Another interesting feature of this vehicle is that unloading can be either frontal or on a 180° basis. Also, there is an optional self-loading swivel-mounted shovel, which greatly increases productivity, and a backhoe.

The client's opinion

Anna Pignatelli, Lesma Handling's Section Chief for Reus Airport, says, **"We are very happy with the performance of the D 201 RH"**. She goes on to explain that these vehicles carry out a wide range of tasks and that they are providing excellent results. Another advantage she points out is the fact that they **"have fewer breakdowns than other vehicles, thanks to the simplicity of their engine design"**.
