

AUSA vehicles equipped with rail dollies perform **excellently** in the **maintenance** and **repair** of railway lines.

Background

The Spanish company VALLINA ALQUILER DE MAQUINARIA, specialises in renting machinery for construction, civil works, public works and minor renovation jobs. It also rents machinery to carry out maintenance and repair jobs on railway lines. To perform this task they use vehicles equipped with rail dollies (iron wheels that allow them to move on rail tracks). They choose the AUSA brand because it offers a wide range of models that adapt to their needs and those of their clients.

AUSA Commercial Solution

Through MAPRINSA, AUSA's distributor in Asturias, VALLINA ALQUILER DE MAQUINARIA has acquired 25 self-propelled concrete mixers, 30 dumpers and 2 TASK M50 vehicles. The ample range of products and services offered by AUSA was a key factor in the decision to add different AUSA models to its fleet of vehicles. MAPRINSA knows its sector very well and provides an impeccable technical service. We can see that AUSA is the ideal solution for companies working in the rental of heavy machinery.

Work to be done

AUSA's rail dolly equipped vehicles are used to carry out maintenance and repair jobs on railway lines. The self-propelled concrete mixers prove very useful, given that this work is performed at night, when the concrete plants have already closed. Normally, when working during the day it is the dumpers that bring cement to the work site. The dumpers are responsible for transporting all manner of materials needed for these repair jobs. Likewise, the TASK M50 vehicles are also used for several different jobs. The most original of these is its use as an ambulance in construction work in tunnels, as required by law. This new role for the TASK M50 was the brainchild of VALLINA ALQUILER DE MAQUINARIA. The company's Management tell us that the key factors in this decision were the vehicle's performance and its price, which is much lower than that of any comparable vehicle used for this purpose.

AUSA WITH RAIL DOLLIES

TASK M50

AUSA self-propelled concrete mixers, dumpers and the TASK M50

AUSA's self-propelled concrete mixers offer stability on any surface and excellent manoeuvrability in confined spaces. VALLINA ALQUILER DE MAQUINARIA has vehicles with capacities ranging from 500 to 1,100 L. MAPRINSA's advisory role was an essential factor in the company's acquiring the most suitable machinery.

With regard to the dumpers acquired by the rental company, these are different models, with load capacities ranging from 1,500 to 4,000 kg. Those with capacities of between 1,500 and 1,750 kg have rigid chassis and are remarkable for their toughness and their ability to work on different surfaces, in both two-wheel and four-wheel drive versions. Meanwhile, vehicles with load capacities of between 2,000 and 3,000 kg all have continuous four-wheel drive and can be purchased with two types of transmission: mechanical or hydrostatic. Unloading can be either frontal or on a 180° basis. Finally, the 3,000 to 4,000 kg AUSA dumpers are compact vehicles that allow goods to be moved in confined spaces and on irregular surfaces, thanks to their four-wheel drive and articulated chassis, a feature that provides great manoeuvrability.

The TASK M50 is also a UTV (Utility Terrain Vehicle), with a load capacity of 500 kg, making it the vehicle with the highest capacity in its class. It guarantees maximum reliability and durability. One of its main advantages is the fact that it can access complicated areas in the most extreme conditions. Another feature is its multi-service nature, which allows it to be used for all manner of tasks. Also, several different types of accessories can be used with the vehicle, allowing the user to customize it according to the job at hand. Last, but not least, maintenance is very simple.

The client's opinion

Ángel Vallina, General Manager of VALLINA ALQUILER DE MAQUINARIA, explains that his company has opted for AUSA machinery because **"it is a brand we have been working with for years and we know it well"**. He adds that they have an excellent working relationship with the AUSA distributor for Asturias (MAPRINSA), and their **"response when we need a spare part is always very fast"**.
