

AUSA Job Report 13

THE DUTCH MUNICIPALITY OF COEVORDEN USES AUSA M300H VEHICLES THROUGHOUT THE YEAR

Background

The Municipality of Coevorden, situated in Drenthe (The Netherlands), requires machinery for cleaning and snow clearance. For this reason, they need machines that can be used all year round for different functions.

Long-time users of AUSA, they have recently gone back to the company to acquire new machines.

AUSA Commercial Solution

Thanks to the commitment and excellent customer service of the AUSA distributor in the area, AebiSchmidt Nederland, the Municipality of Coevorden has recently acquired two M300H multifunctional vehicles. Coevorden has had two M250H since 2006 and the results have been excellent. The two new M300H machine are ideal for this client because its versatile functionality means lower costs for the municipality due to the fact that different machines are not needed for each task.

The high standards of AUSA in vehicle design and the professionalism of its distribution network has resulted in yet another satisfied client.

The work to be done

The latest acquisition, the M300H Euro IV, operates in winter with snow plough, salt spreader and rolling broom. The latter attachment is also used in spring, summer and autumn for the cleaning of streets and cycle lanes. The M300H also carries out refuse collection using a Hagemann compactor. One of the M300H acquired is fitted with a crane for a variety of tasks.

M300H

M300H: versatility and power in a single machine

Versatility is perhaps the one main distinguishing features of the M300H. The possibility of using up to 8 different attachments on a single machine makes it a vehicle very much in demand by companies and municipalities because it results in a direct saving in both machinery (including insurance and road tax) and maintenance.

The latest version is fitted with a Volkswagen Euro V, 100 CV, 4-cylinder engine, and boasts hydrostatic transmission, permanent 4x4 traction, and a payload capacity of 2,500 kg. Its versatility is complemented by the ease of changing attachments afforded by the "LINK" system.

The opinion of the client

Municipal Manager, Geert Tromp highlights the main benefits of the M300H by stating that, "**it is robust and offers the large payload capacity required for the salt spreader and the rolling broom**". He also underlines the importance of the fact that "**the machines can be used all year round**". He concludes by pointing out other advantages of the model: "**...its excellent design and powerful 4x4 traction, which suits perfectly to the work to be done in Coevorden**".
