

## THE AUSA M 300 H, THE CHOICE OF 71 COUNCILS IN CATALONIA

### Background

Due to the great versatility afforded by the use of its different attachments, the AUSA M 300 H multiservice vehicle is one of the most in-demand machines amongst local councils. The M 300 H enables a variety of tasks to be carried out with a single machine, which means savings in maintenance, insurance and road tax.

Numerous Catalan councils use the M 300 H to perform a range of tasks for which it can be equipped through the fitting of different attachments. The M 300 H is used for street cleaning, road and public garden maintenance, and the removal of snow. This multiservice vehicle can also be fitted with an elevating work platform and a crane for maximum safety when working at height.

### AUSA commercial solution

Because of these benefits, 71 Catalan councils have chosen the basic M 300 H model (chassis, cabin and three-way tipper). Thanks to a Catalan Government initiative, the machines have been subsidised to the tune of 70% and 90%, according to district population and needs. They are fitted with 4x4 or 4x2 traction depending on the intended use of the vehicle in each area. In this way, AUSA continues to be the leading equipment supplier to councils, local council associations, and maintenance and/or general services companies.

### The work to be done

The AUSA multiservice vehicle can carry out a variety of tasks in the different council areas, depending on the attachments selected. Each attachment is designed for a specific purpose and can be rapidly changed. Attachments include: the vacuum sweeper with its capacity of 3 m<sup>3</sup> and 600-litre water tank, which offers a top speed of 65 km/h; the wash bar with its 2000-litre water tank and bar that can be adjusted from the cabin; the snow plough and salt spreader; the elevating work platform with a maximum height of 15 m and two-person basket (maintenance, electricity, pruning, and other functions); the bush cutter for roads and pathways; the crane with an outreach of 7.5 m; and finally the three-way tipper for transportation, which comes as a standard feature.

## M 300 H: versatility and state-of-the-art technology

In addition to its great versatility the M 300 H is a vehicle of outstanding technical quality.

It is fitted with a VOLKSWAGEN 2.0 TDI, 102 CV engine with the lowest emissions on the market (EURO V). The vehicle has a compact chassis and is extremely robust. These features, added to AUSA's innovative applications, enable any job to be carried out easily. The powerful hydraulic equipment of the M 300 H facilitates the safe fitting of all attachments with the greatest of ease.

The M 300 H offers a payload capacity of 2,500 kg and a top speed of 60 km/h. It is fitted with 2-speed hydrostatic transmission, 2 reduction gears and permanent 4-wheel transmission with COMPEN central differential.

The ergonomics, high-quality finish and features of the cabin are of great importance to users and are designed to afford the maximum comfort.

## The opinion of the client

The Town Council of Juncosa (Lérida) uses the AUSA M 300 H. Council official Josep María Llevadot works with the multiservice machine and points out that, **“one of the great advantages of this vehicle is that it combines high performance with compact size”**. In this respect, he emphasises that **“because of its dimensions, it can fit anywhere and is perfect for the work we do, such as the cutting of grass”**. He concludes that the Council is **“very satisfied with the results”**.
